

The screenshot shows the IBM Cognos Analytics interface. The top navigation bar includes the IBM Cognos Analytics with Watson logo and a search bar. The left sidebar contains icons for 'Cards', 'Data relationships', and 'Data sources'. The main content area displays a 'Data relationships' diagram with a central node connected to four peripheral nodes, and a 'Rep.Sales and C.Sales by Month' line chart showing two data series over time. The chart has a title 'Rep.Sales and C.Sales by Month' and a legend with two entries: 'Rep.Sales' (blue line) and 'C.Sales' (purple line). The x-axis lists months: April, August, December, February, January, July, June, March, May. The y-axis represents sales values. The chart shows that Rep.Sales is generally higher than C.Sales, with both showing seasonal fluctuations.
